

Build an Amphibian!

A fossil **Keraterpeton**
from Co. Kilkenny

Keraterpeton was a tiny spiky-headed prehistoric amphibian which lived in Ireland during the Carboniferous Period, 300 million years ago.

To build your amphibian, colour in and cut out each separate part. Then, use split pins to attach the head, arms, legs and tail to the body, at the points indicated. The finished articulated creature should look something like this:
